Enabling Digital Business through:

- Strategy & Architecture
- APIs & Integration
- Process Automation
- Application Development
- Cloud Enablement

Who We Are

Intelligent Pathways are experts in digital business enablement. We help organisations build the technology capabilities, including integration, process automation and applications, required to succeed in the modern economy. Our team is spread across Brisbane (head office), Sydney and Melbourne employing over 50 professionals. As a medium enterprise, our size enables us to service our clients in an agile and responsive manner whilst having an organisational support structure that assures a robust and quality outcome.

Our Services

Strategy and Architecture

Delivering well-defined architecture based on business requirements and technology. Our specific focus is on solution, integration and information architecture and platform engineering.

APIs and Integration Services

Using service-oriented principles we architect, assess technology and deliver modern (APIs and microservices) and traditional (ESB, B2B) solutions.

Custom Application Development

End-to-end application development from inception to deployment using Java, RESTful APIs and Web Services, with UI specialisation in HTML and native mobile technologies.

Intelligent Process Automation

We architect, assess technology and deliver automation solutions that significantly improve process efficiency and the end user experience. We adopt an ecosystem view, using RPA, BPM and other technologies.

Cloud Enablement Services

We architect, design, and implement cloud infrastructures and associated DevOps processes and deployment capabilities.

Support and Managed Services

Intelligent Pathways provides flexible support and managed service options for developed applications and integration and automation solutions.

Our Role - Supporting Digital Transformation

Our role is to help organisations to determine right-fit technology solutions that not only support but are pivotal to the achievement of digital strategy. An understanding of what is possible with technology and/or different approaches can also inform how the strategy can pivot to meet organisation needs.

• Enable execution
• Identify execution gaps
• Identify strategy blind spots
• Uncover strategy opportunity

DIGITAL STRATEGY
• Relative Priorities
• Most important use cases
• Customer-Centric Lens

• Relative Prioritisation
• Timeline for change
• End-to-end process dynamics

TECHNOLOGY
• Existing/ New
• Support/ Hinder priority Operations

Our Experience

INDUSTRY	PROJECT	SERVICE DESCRIPTION
Property & Development	Digitised Project Governance	Architecture and development of an enterprise application that enables the automation of project governance approval and management processes.
Disability NFP	Business Improvement Program	Architecture and implementation of foundational integration capability in support of Business Improvement & CX objectives, and delivery of integrations with third party funding providers.
Education	Digital Transformation	Establishment of a digital business platform to support student experience and internal process automation initiatives, key components include: • Centralised API Integration platform • Business Process Automation capability • Robotic Process Automation capability
Aviation	Digital Transformation	Partnered on multiple digital transformation initiatives including design and development of an online self-service portal, integration layer for new website with booking capabilities and strategic advice to optimise AWS costs.
Emergency Services	Ambulance Patient Care Mobile Application	Design, development and support of a Patient Care Mobile Solution to enable paramedics on-scene data capture and information transfer to hospitals.
Career Services	Career Transition Application	Architecture and design of an application that supports employees through employment change, utilising AWS technologies. Enablement of devops and fully automated deployment capabilities.
Retail	Customer Experience Program	Digital strategy and architecture to enable single view of customer.
