

Enabling Digital Business through:

- Data & Analytics
- Integration
- Process Automation
- Custom Application Development
- Cloud Enablement

Who We Are

Intelligent Pathways are experts in digital business enablement. We help organisations build technology capabilities, including data & analytics, integration, process automation and applications, required to succeed in the modern economy. Our team is spread across Brisbane (head office), Sydney and Melbourne employing over 50 professionals. As a medium enterprise, our size enables us to service our clients in an agile and responsive manner whilst having an organisational support structure that assures a robust and quality outcome.

Our Difference

We provide independent expertise that enables the setting and execution of technology direction for organisations who have recognised a compelling imperative to undertake digital transformation. We provide collaborative service offerings that complement and uplift client capabilities, and deliver 'fit for purpose' technology choices.

Our focus is to help our clients realise their business objective within the window of opportunity and expand their capability rather than seek to create dependency. Because we understand the broader interdependencies and opportunities that exist in a technology ecosystem, we combine strategic rigour with delivery agility to equip clients with the technologies that accommodate dynamic and transformative business goals.

Our Services

Data & Analytics Activation

We develop data strategy & architecture aligned to business objectives, design and deliver technology ecosystems and accelerate stakeholder access to data insights through reporting and analytics.

Integration Services

We architect, design and deliver holistic integration solutions that ensure integrated and enriched data – at the right time, in the right shape, and to the right data consumer.

Intelligent Process Automation

We architect, design and deliver automation solutions that significantly improve process efficiency and the end user experience. We adopt an ecosystem view, using RPA, BPM and other technologies.

Custom Application Development

End-to-end application development from inception to deployment using Java, RESTful APIs and Web Services, with UI specialisation in HTML and native mobile technologies.

Cloud Enablement Services

We architect, design, and implement cloud infrastructures and associated DevOps processes and deployment capabilities.

Support and Managed Services

Intelligent Pathways provides flexible support and managed service options for developed applications, analytics capabilities and integration and automation platforms.

Our Role - Supporting Digital Transformation

Our role is to help organisations to determine right-fit technology solutions that not only support but are pivotal to the achievement of digital strategy. An understanding of what is possible with technology and/or different approaches can also inform how the strategy can pivot to meet organisation needs.

Our Experience

INDUSTRY	PROJECT	SERVICE DESCRIPTION:
Agriculture & Retail	Data & Integration Roadmap	Data & Integration strategy and roadmap to support rapid business growth and decentralisation strategy
Disability Care Sector	Data & Analytics Strategy and Implementation	Data & Analytics strategy and phased implementation to enhance internal capability and enable data-driven decision insights.
Aged Care Sector	HCM Integration and integration modernisation	Providing integration strategy through to delivery for the implementation of HCM PaaS.
